EDUCATION

University of California, Berkeley

Bachelor of Arts in Data Science (Applied Mathematics Focus)

Graduated May 2026

GPA: 3.87

WORK EXPERIENCE

invrse - <https://www.invrse.dev>

Founder/CEO

Dec 2025 – Present

Berkeley, CA

- Founded and lead invrse, a boutique web development agency, delivering high-performance, bespoke websites by replacing template-driven workflows with custom-coded architectures.
- Engineered scalable web applications from scratch, prioritizing technical SEO and a modern tech stack (Typescript, React, and Vite).

SPAN Digital

Data Engineering Intern

Jun 2025 – Aug 2025

San Francisco, California

- Built ETL pipelines on AWS (S3, Python) using medallion architecture, integrating Slack, JIRA, and GitHub data.
- Created ObservableHQ notebooks for workforce analytics used by senior managers.
- Designed data models tracking employee engagement, collaboration, and productivity lifecycles.

Colchester Global Investors

Software Engineer Intern

Jun 2024 – Aug 2024

London, England

- Developed an optimized PDF generation library in Python to automate the creation of factsheets and reports.
- Collaborated on an 8-week collaborative project, contributing from initial design to implementation and documentation.
- Utilized SQL, Python, and Excel to cleanse and process large-scale datasets from databases.

Berkeley Student Affairs IT

Endpoint Engineer

Oct 2024 – Jun 2026

Berkeley, California

- Configured and deployed workstation and mobile device solutions for campus clients using tools such as Microsoft WDS, Apple School Manager, and Meraki Systems Manager.
- Designed and managed custom device configurations and security policies, ensuring compliance with institutional requirements.
- Tested and documented IT systems to ensure consistency and maintain best practices in endpoint management.

Marin Country Day School

IT Intern

Jul 2023 – Aug 2023

Corte Madera, California

- Installed and configured new devices across campus, ensuring proper functionality and seamless integration.
- Provided technical support to faculty, troubleshooting and resolving a wide range of IT requests efficiently.

PROJECTS

BookRex – AI-Powered Book Recommendation Platform

Nov 2025

- Built full-stack TypeScript/Node.js app generating personalized book recommendations using LLM APIs
- Integrated platform with BookLore and Goodreads reading history.
- Implemented SQLite database, RESTful APIs, and secure authentication with bcrypt hashing and session management.
- Integrated Hardcover GraphQL API for book metadata enrichment.

Enchantment Rarities (Minecraft Mod) - Java

Jul 2025

- Designed and implemented a modular enchantment rarity system using the Fabric API.
- Encapsulated tiered rarity logic, enchantment weighting, and item compatibility rules.
- Released publicly on Modrinth with over 2,500 downloads, demonstrating active user adoption and version maintenance.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS, Java, C++, Swift

Frameworks/Libraries: React, Node.js, Vite, pandas, numpy, scikit-learn, pytorch

Tools & Infrastructure: AWS (S3), Docker, Git/Github, SQLite, GraphQL

Data & Analytics: ETL Pipelines, Medallion Architecture, Data Visualization, Predictive Modeling
